

This leaflet is intended for patients prescribed Enstilar® (calcipotriol/betamethasone dipropionate cutaneous foam).

This leaflet does not replace the Patient Information Leaflet (PIL) provided with your medicine which you should always read carefully.

PSORIASIS RELIEF IN A CAN

Enstilar® contains calcipotriol and betamethasone dipropionate (50 micrograms/g + 0.5 mg/g) in a foam spray formulation.

- Enstilar® is a foam spray plaque psoriasis treatment that comes in a can
- Just spray it on once a day for 4 weeks and your psoriasis may begin to clear

Enstilar® foam spray is designed to be sprayed onto your skin. Simply apply where your doctor has indicated, following these simple steps:

SHAKE

SPRAY

RUB

1. Remove the cap and shake the can for a few seconds before use. Wash and dry hands before application.
2. Apply the foam by holding the can at least 3 cm (just over 1 inch) from the skin and spray directly onto each affected area. Spray the foam by holding the can in any direction except horizontally (on its side).
3. Gently rub the foam spray into each affected skin area.

Close-up images of patients with psoriasis before treatment and 4 weeks after treatment

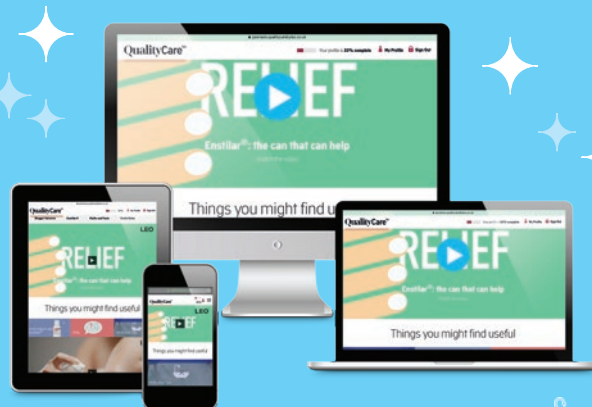

...AND REMEMBER

- Don't use more than 15 grams per day
- Spraying for 2 seconds provides approximately 0.5 g of Enstilar® foam spray and this should cover an area of skin roughly corresponding to the surface area of an adult hand
- **Caution:** Extremely flammable aerosol. Protect from sunlight and do not store above 30°C. The can should be discarded 6 months after first opening

WANT TO FIND OUT MORE?

QualityCare™ is a free website, providing information and support on psoriasis, and treatment with Enstilar® foam spray.
